

# Home Health Telemedicine with telmedx

Clinical studies over a three year period show that a home health team managed by Wound, Ostomy and Continence nurses were able to see, on average, +236% percent more patients per month with a reported enhancement in care and improved outcomes.<sup>1</sup>

See back page for example of one of many cases reported.

- Remote consultations with high-resolution video & photos via mobile phone rear cameras to a secure Web browser
- High-res quality maintained even when mobile service or Wi-Fi signal weak
- App-based platform—simply download to start video feed
- Clearly see patient condition from any location over mobile network or Wi-Fi
- Doctor via browser remotely controls phone's camera to capture images
- HIPAA-compliant—no video or photos saved by telmedx
- Passed rigorous in-use security vetting

## CASE STUDY – HOME HEALTH PATIENT

Male 70 years old with limited mobility and edema, copious serous drainage and multiple pinpoint shallow wounds to BLE

- Care plan stated: gently cleanse BLE, patient may shower prior to visit
- WOCN made home visit to assess, performed telmedx consult with doctor
- Noted BLE were bright red with multiple clusters pinpoint pustules. Patient complained of pain to BLE during care
- Several images were captured with telmedx and a Virtual Dermatology MD remote telmedx consult took place within 2 hours
- Dermatologist diagnosed patient with pustular psoriasis, so current care plan was actually causing harm
- New orders: rinse BLE, no rubbing or wrapping; OTA, triamcinolone cream
- Condition resolved within a week

Remote consult photo showing white blisters common to pustular psoriasis
